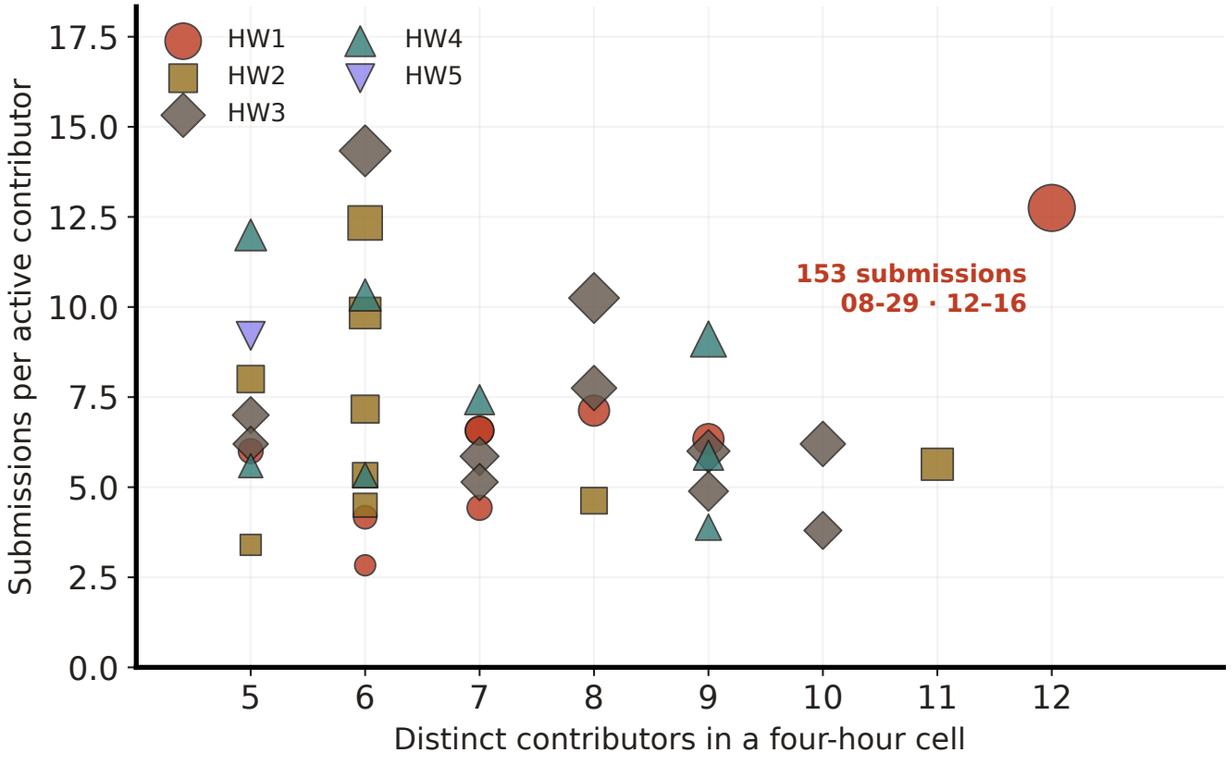
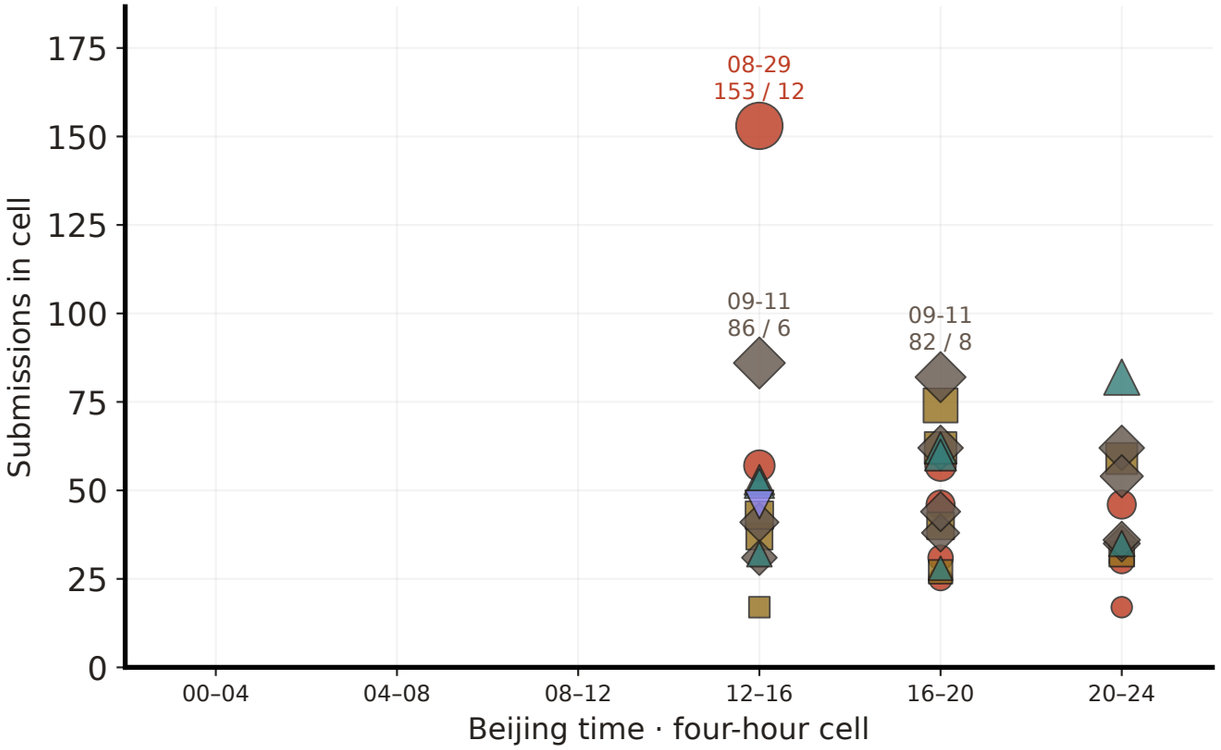
Visible submission peaks / reach and intensity

38 publishable positive cells · peak day 2026-08-29: 233 submissions from 14 students

(a) Reach versus repeat intensity



(b) When visible bursts occurred



1485 submissions fall in masked cells; an overall four-hour peak cannot be inferred from this public view.
Marker area scales with submissions. Ratios describe active contributors, not study time.
Overlapping-window cells pool events; snapshot-day cells may be partially observed.
HW5 unfinished; configured deadline 18 Oct 23:59 Beijing
