

Visible submission peaks / reach and intensity

29 publishable positive cells · peak day 2026-08-29: 233 submissions from 14 students

(a) Reach versus repeat intensity

(b) When visible bursts occurred

677 submissions fall in masked cells; an overall four-hour peak cannot be inferred from this public view.
Marker area scales with submissions. Ratios describe active contributors, not all students or study time.
