

When do retries make progress?

Rate = new bests / eligible retries · S = distinct contributors

Fraction of configured window elapsed · opening → deadline

Color: share of retries setting a new best

Five equal-duration bins within each homework; bin duration differs between homeworks.
Strict new bests only, after a baseline and before full credit. Counts are repeated events.
Hatched cells are withheld, not zero (<5 students or secondary suppression).
Configured deadlines; individual extensions unavailable. Timing is not a deadline effect.
